

We're nearing the end of the competition. Help your building finish strong!

- Turn off lights in unoccupied areas.
- Report drips or leaks to custodial staff.
- Close the doors
- Unplug nonessential electric appliances.
- Get students involved!

Did you know the energy use in your home produces twice the amount of air pollution as your car? But a change as small as switching from incandescent light bulbs to ENERGY STAR certified LED light bulbs can greatly reduce your environmental impact.

- **If every American home replaced their five most frequently used light fixtures or bulbs with ENERGY STAR products, the reduction in greenhouse gas emissions (GHGs) from their combined energy savings would be the same as taking 5 MILLION cars off the road.**
- **One ENERGY STAR LED light bulb replaces about 25 incandescent light bulbs because it lasts 25 times longer than the average light bulb.** If you use 50 light bulbs in your home, during the life of the energy-efficient bulbs, you've reduced the **number of light bulbs you throw away from 1,250 to 50.** This reduces waste and the pollution associated with manufacturing, transportation, energy production, and disposal.

Cutting down on greenhouse gas emissions is a crucial element in preventing climate change and making a positive impact on the environment. A lot of little actions can add up to a big impact!

Have a great winter break!

Bring ENERGY STAR to the Classroom!

In an effort to promote energy efficiency within the District, the DMPS Energy Team wants to help teachers discuss this valuable message in the classroom. Director of Facilities Jamie Wilkerson and Energy and Environmental Specialist Dave Berger would like to visit interested schools and classes. From light bulb efficiency to heating and cooling, discussions are intended to educate students on the efforts the District is making and how they, too, can make an impact. To schedule a visit, please contact Sarah Holland at extension 7860.

ENERGY REPORT CARD

SITE ENERGY USAGE REPORT

There was an 11% decrease in the total number of degree days during the comparison timeframe. Degree days provide a way to evaluate the amount of fuel required to heat or cool a building by comparing average daily temperatures to a standard temperature of 65°.

November 1, 2014 to October 31, 2015

Percentage change compared to same time period of previous year.

Hoover/ Meredith***	17,566	58.7	-8.29%	86	Moore**	N/A	N/A	N/A	N/A

Only buildings with a score of 75 or higher are eligible for ENERGY STAR Certification

Green = Decrease in energy use

Yellow = Maintained usage within 10%

Red = Increase in energy use

* Welcome Center has a large increase due to the addition of the walk-in freezer.

** No data available for Moore due to renovations.

*** Hoover/Meredith buildings are combined due to combined meters.
