

What's Happening at Scavo High School

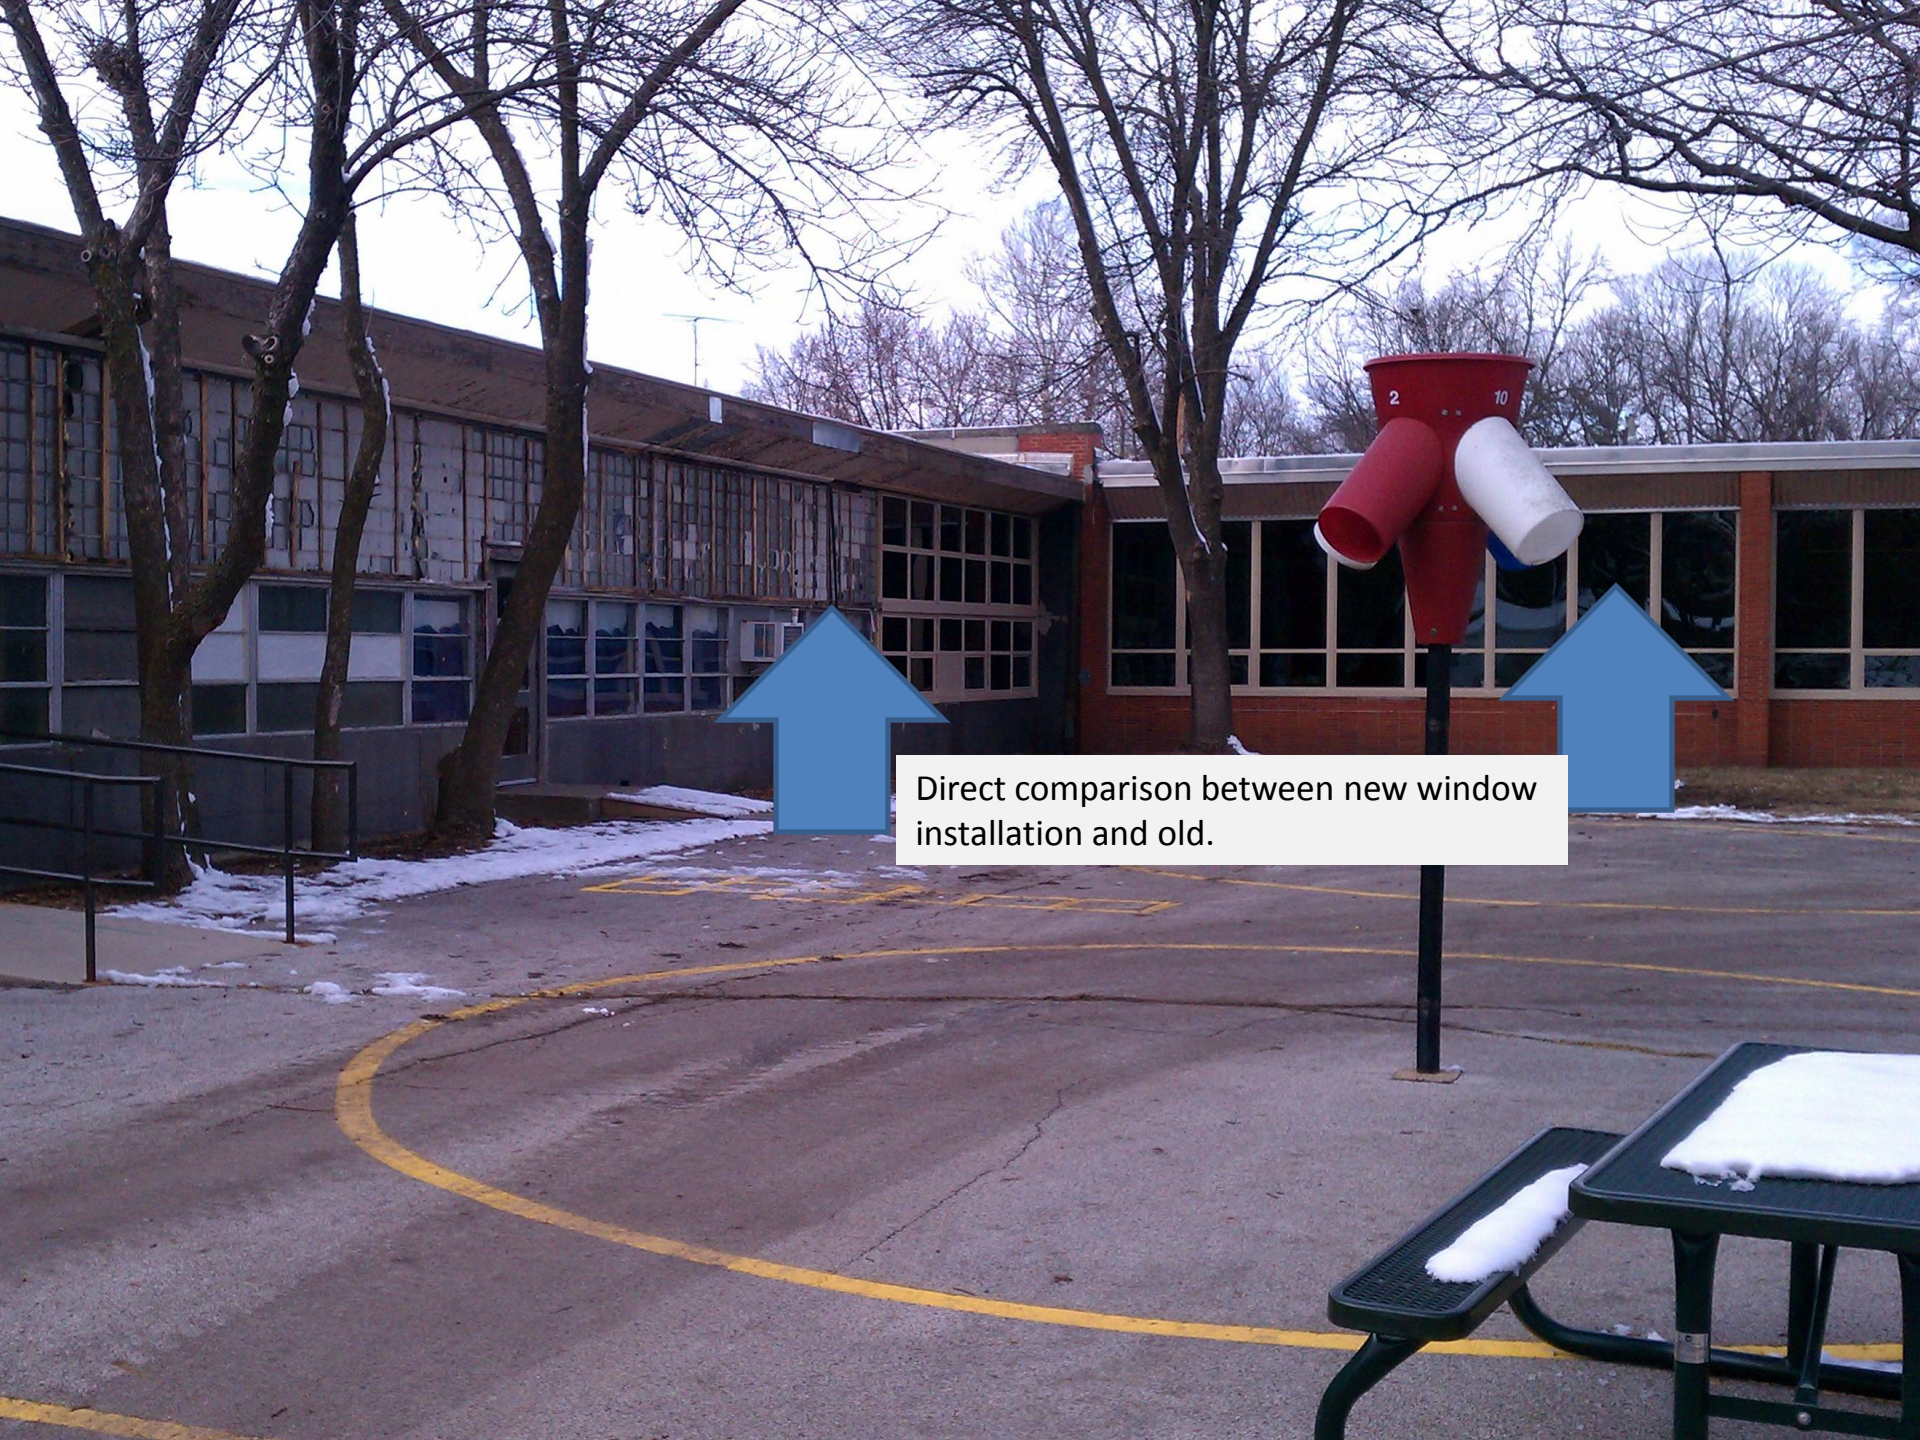

Window Replacement Project

February 2012

- Scavo High School is located at what was formally Moore Elementary School at 3725 52nd street.
- The window replacement project is funded by the Physical Plant and Equipment levy (PPEL).
- New windows are high level energy efficiency units and replace the former leaky single glazed windows. Staff have already commented how much improved the building looks and rooms are much more comfortable since drafty windows are gone.

Old windows in courtyard area yet to be replaced.

Direct comparison between new window installation and old.

New windows on the west elevation of Moore.
Notice the increased natural light since upper area used to have panels blocking light.
